

## Lecture 6: Importing Fortigate Appliance

---

### Notes:

- The default user name for the virtual appliance is **admin** with no password
- To release the mouse from virtual machine window, press ctrl+alt
- Pressing tab while typing a command on Fortigate virtual appliance terminal will auto-complete the command
- Port1 of the virtual appliance need to be set to NAT mode on VMware Player (as described in lecture's video) to make reachable for Ubuntu machines

### Fortigate commands used in this lecture:

Command	Description
config system interface	To change network interface of the virtual appliance
edit port1	To modify port1
set mode static	Set the mode of this interface to static
set ip 192.168.219.12 255.255.255.0	Assign this IP address to port1 (please set the IP address according to the IP range assigned to Ubuntu machines by VMware Player)
end	To save configuration
config router static	To add a static route
edit 1	To assign a number to the new entry in routing table
set gateway 192.168.219.2	Add default gateway to the virtual appliance
end	To save configuration
